

3D Laser Scanning

REACHING
the
PEAK in
BUILDING

KNOWLEDGE IS POWER

3D laser scanning ensures that design and construction is based on the most accurate information from the start. By creating a virtual walk-through of a construction site or as-built conditions, 3D laser scanning can remove unforeseen issues.

*Blue Northern Builders
employs the latest in 3D
scanning technology to
provide a level of detail
that far exceeds traditional
survey techniques.*

IMPROVE PLANNING, DESIGN, AND CONSTRUCTION

3D scanning provides vital information to help:

- Analyze a potential construction site
- Identify and resolve potential problems
- Produce as-built design documents
- Prepare for future phases of construction
- Avoid costly changes and delays
- Enable project owners to visualize results
